

Pain, Rehabilitation, Integrative Medicine Advantage

# Photomedicine Principles & Practice

This course has become the perfect partner to the Medical Acupuncture for Veterinarians program and is the onsite, hands-on counterpart to CuraCore's online, research-driven course in Photomedicine.

Open to veterinarians, veterinary technicians / nurses, and veterinary students, this program dispels myths promulgated by some companies that more power means more progress, and that shorter treatment times should be our main goal.

Enjoy your photomedicine more by gaining insight into a diversity of devices, from Class IM to Class IV as well as light-emitting diodes that your clients can use without the risk of ocular damage that home-based laser treatment entails.

## **Morning Instruction**

Photomedicine Basics. Learn the clinical significance of basic photomedicine parameters, including wavelength, power, frequency, duration of application, and how cells, tissues, and organisms respond to the therapeutic application of light.

## **Afternoon Instruction**

Practice, Practice, Practice. Develop photomedicine treatment protocols based on the principles covered in the morning session as well as through implementation of Dr. Robinson's comprehensive neuromodulatory, myofascial, and vascular / lymphatic approach on your willing peers.

7 Hours Continuing Education

**When:** October 17, 2020 9:00am - 5:00pm
